Credo Statement of Conformance

On October 20, 2014, the following pages at http://search.credoreference.com conform to the Web Content Accessibility Guidelines (WCAG) version 2.0 at Level AA.

-  (http://search.credoreference.com)
-  AND NOT (http://search.credoreference.com/search/visual/)

The specification that this content "relies upon" is HTML5. The technologies that this content "uses but does not rely upon" are: JavaScript, Ajax, CSS, PDF, PNG, JPEG, MP4/M4v. Content was tested using a variety of user agents and assistive technologies.

There are two exceptions to the conformance described above.

Credo’s videos do not contain closed captions or audio descriptions, thus they fail Level A success criterion 1.2.2 and Level AA success criteria 1.2.4 and 1.2.5. As Credo is a content aggregator, video content in Credo comes from third party publishers, and synchronized captions are not included with publisher content. Many video and audio items in Credo content contain a non-synchronized textual transcript (entry body) that may be read by a screen reader. Credo is exploring ways to provide synchronized captions to video items in the future.

The Mind Map page (http://search.credoreference.com/search/visual/) is currently known to cause issues with Screen Readers and keyboard navigation, in relation to Level A guideline 2.1.1. Credo is working to ensure that the Mind Map is fully keyboard accessible. The Mind Map is not essential for use of Credo Online Reference Service.
