How you and your users can benefit:

- Keep a close analysis of markets and companies with daily report updates
- Get an overview of the whole market with over 2,300 companies tracked
- Be confident in our data knowing that major corporations are using the same information to make crucial strategic decisions
- Save time searching through multiple web sources. The Life Science Analytics’ Report Center is supported by intuitive navigation and Boolean search which enable users to find the exact information they need in a matter of seconds
- Cut and paste content directly into your own documentation from Life Science Analytics reports available as PDF downloads
Life Science Analytics’ Report Series

Analytics Reports
Analytics Reports provide a unique snapshot of a company’s health. Each report evaluates a company’s performance across a broad range of proprietary metrics focusing on pipeline, financial, management and market-related areas. Rating scores are provided which can be used to benchmark the company against an index of similar competitors.

Competitor Reports
These reports deliver detailed analysis of a company’s preclinical, clinical and marketed pipeline of products. A complete listing of each company’s entire pipeline is provided along with graphical and tabular presentation of the pipeline by therapeutic or disease category. Every Competitor Report compares the company against its primary competitors by individual therapeutic indication.

Deals & Alliances
This report series provides detail on companies’ deals and deals partners. Each report contains information on size of deals, deals by therapeutic area and stage of development, product and technology. By pairing this intelligence with contact information, business summaries and company details, these reports offer a complete view of companies’ partnering deals within the industry.

Financial Reports
Financial Reports deliver key sophisticated analytical ratios and performance analyses for public biomedical companies. Each report provides an in-depth virtual snapshot of a company, enabling the user to better understand its financial position.

Pipeline Reports
These reports contain detailed information in tabular and graphical formats on pipelines by phase and therapeutic indication. In addition, management information, deals and alliances and recent news on the company including key milestones are also provided.

Private Company Reports
Providing up to date insight into the structure and operations of privately-held pharmaceutical, biotechnology and biomedical companies.

Therapy Area Pipeline Reports
Containing detailed information on drug pipelines by therapeutic indication. Each report provides insight into the pipeline status of a specific therapeutic indication by company and by stage as well as a summary of the latest news and developments in this area.
