Benefits of the Chemistry Backfile Collection

- Of the eleven journals included in the General Chemistry Backfile Collection, five are ranked in the top quarter of their subject categories in ISI’s 2002 Journal Citation Reports, four in the top third, and two in the top ten.
- A historical collection of seminal literature on inorganic, organic, physical, theoretical, and applied chemistry
- Immediate access to more than 620,000 pages of research articles
- From the 1st issue onwards: convenient search functions of all titles and all years
- HTML headers and footers as per Wiley InterScience standard allowing full citation linking.
- One-time purchase involves no running costs; customers pay once for ongoing access and reduce their storage costs

The Wiley InterScience Chemistry Backfile Collection, launching in September 2004, will contain more than 170 years of digitized back-issue content across 11 leading journal titles. The collection provides a backfile resource for core research across the discipline of chemistry, and includes full coverage, back to inaugural issues, of seminal titles, including the Journal of Computational Chemistry and Advances in Synthesis and Catalysis. This collection will be offered through Wiley InterScience, and includes the following titles:

Backfile journal articles are presented with the article body in PDF and header material and references in HTML, thus allowing both internal (i.e.within Wiley InterScience) and external (CrossRef/DOI, PubMed, ISI Web of Science, CAS etc.) linking.
