Research infrastructure

NSLA meeting with CAUL
18 September 2006

Warwick Cathro
Assistant Director-General, Innovation,
National Library of Australia
Research infrastructure

- Collaborative support services needed by distributed research teams
- Middleware services (such as federated authentication)
- Services needed to manage, preserve and make accessible the outputs of research
Advisory processes

- ARIIC
- E-Research Coordinating Committee
- NCRIS Research Data Management Consultation
- PMSEIC Working Group on Data for Science
PMSEIC Working Group

- Co-chaired by Robin Batterham and Fiona Stanley
- Will report to PMSEIC on 8 December
- Is charged with reporting on the need for a national framework for managing Australia’s research data
Digitisation

- NLA sees as research infrastructure
- Especially relevant to support for humanities research
- Also part of public information infrastructure
- DEST has clearly excluded it
- Future funding may depend on Collections Council process
Projects

• NLA is a partner in ARROW, APSR, MAMS

• Strongest involvement has been in ARROW Discovery Service and in APSR
ARROW Discovery Service

• Provides federated access to Australian university repositories
• Using OAI, has harvested 20,000 metadata records from 13 repositories
• Will be enhanced in 2007
National Library and APSR

- Contributed experience in digital archiving and preservation
- Discussion paper on sustainability issues
- Participated in survey of researcher needs in managing data sets
- Advised on needs for implementing preservation metadata in repositories
- Will be trialling an obsolescence notification tool
Conclusions

• NLA has benefited from working with universities in research infrastructure field
  – has shared experience in digital sustainability and discovery infrastructure
  – interested in possible exploitation of some research infrastructure outside the research domain
